DETAILED ACTION

1. Claims 1-28 are pending in this application.

Election/Restrictions

- 2. Applicant's election without traverse of Group II, claims 11-28, in the reply filed on May 2, 2006, is acknowledged.
- 3. Claims 1-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 2, 2006.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Application/Control Number: 10/748,076 Page 3

Art Unit: 1756

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 11-28 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 23, 30, 33 and 35 of copending Application No. 10/826,602. Although the conflicting claims are not identical, they are not patentably distinct from each other because both teach an immersion lithography process using a barrier layer (10/826,602) which is the same as a protective layer (current application).

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for

Application/Control Number: 10/748,076

Art Unit: 1756

patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page 4

7. Claims 11-17, 20, 21 and 23-27 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Chang (US 2005/0123863 – filed on 12/3/2003).

Chang teaches a process of immersion lithography using a protective layer. Figures 1A-1D and paragraphs 0020 to 0030 teach the process. A photoresist layer, 106, is covered with a protective layer, 108. Figure 1A shows the protective layer as being planarized but if the underlying layer has topography, then the protective layer will have topography. Figure 1B depicts a patterned exposure which paragraph 0023 teaches can be through a photomask. The photoresist is exposed using immersion lithography and then developed. Paragraph 0027 teaches that in the development step, portions of the photoresist and protective layer are removed.

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/748,076

Art Unit: 1756

9. Claims 18, 19, 22 and 28 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chang.

Page 5

The teachings of Chang have been discussed above. The claims under rejection recite limitations on the thickness of the protective layer and matching indices.

It would have been obvious to one of ordinary skill in the art to have determined without undue experimentation the thickness of the protective layer necessary to allow for desired exposure of the photoresist layer. In addition, the indices must be matched to allow for proper throughput of radiation which will allow for exposure of the photoresist layer.

Conclusion

10. Any inquiry concerning this communication should be directed to Examiner K. Duda at (571) 272-1383. Official FAX communications should be sent to (571) 273-8300.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff, can be reached at 571-272-1385.

Information regarding the status of an application may be obtained from the Patent Application Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through
